

Features

- UV and CD technology options
- Long life
- Designed to run cool
- Convertible power: 110-240 VAC / 50-60Hz
- Compact and lightweight

Family of Ozone Spa Sanitizers by Balboa

zone

3

balboa-instruments.com

Benefits

- Only family of ozonators designed specifically for the hot tub environment
- Lower energy consumption
- Higher ozone output than comparable models
- Less inventory needed with universal power supply
- Corrosion-proof housing

Certificate no. 900854

A Family of Choices for CD and Spa Ozone

More Flexibility with More Choices

The O₃zone family of ozonators were designed by Balboa, the leader in reliability in spa controls for over 20 years. These compact sanitizers were created specifically to withstand the demanding environment of the hot tub. Take your choice of Corona Discharge (CD) or Ultraviolet (UV) technology and rest assured that you have a comprehensive and reliable source of naturally disinfecting ozone.

O₃zone Chip

Our new chip technology ozonator produces up to 20% more ozone than comparable models. A lower power draw represents a savings of up to 37% less energy and with twice the precious metals and twin emitters, it is one reliable ozone generator.

O₃zone Cartridge

Our compact and polymer cartridge ozonator has a smaller footprint than most units and saves energy as well. It also features an extra fuse that protects from local failure and backs up the fuse on the controller board. This sealed unit is protected from harsh corroding environments and produces stable ozone output over a wide range of temperatures.

O₃zone UV Electronic Ballast

Our UV lamp ozone with PlasmaCell™ yields higher, consistent ozone levels using 1/3 the energy of conventional UV generators. In addition, the SmartStart™ solid-state electronic ballast eliminates start-up flicker, sputter, electronic noise and GFCI tripping.

CD Chip

CD Cartridge
